ORE IS NINETY FEET IN WIDTH

Scranton Company Has Just Crosscut Fine Body Lead-Zinc Ore.

SHIPMENTS GOING TO ZINC SMELTERS

Unique Company of North Tintic Is Making Good in Earnest.

coming from the Scranton mine of the North Tintie section these days, and reurrent on Thursday were to the effect that the lower tunnel workings have opened a body of ore which was is one of the results of the determination of the company reached several months ago to give the property an extensive treatment of deep development and there is a tonnage of ore now available that has never been exceeded in this old producer.

How extensive this new ore body outside of the crosscut effort, is not now known, any more than what is suppose to be the same resource from eighty to one hundred feet below the discover level, and also at a distance of one hundred and fifty feet north along the strike, where the ore is yards across. The ore carries lead and zine values. Much of it will bear shipment just as it is broken down, while much of it must of necessity pass through the hands of the Forters before it is ready for the market. The ore, owing to its high zine values, must be shipped to the zine market in the middle west, and the company in its history lins paid a fortune in railroad rates.

Notwithstanding that many hundreds of feet have been driven by the management, there have been no limits found to the resources of this mine. Forty me are employed at present. The company is shipping at the rate of 500 to 1006 ton monthly.

shipping at the rate of 500 to 1000 tons monthly.

The Scranton is one of the most unique propositions in Ctah. In the first place, it is an old-fashioned organization, a close corporation, with a capitalization of only 20,000 shares of stock. Out of the 20,000 shares close to 27,000 shares are lield by strong Scranton, Pa., people. The company has been a big money-maker, but it has at the same time been extremely liberal with its expenditures for equipment and development, and no dividends have as yet been declared. The company owns 200 acres of patented ground. Theodore Wolff is president and Judge H. A. Knapp is vice president, both being residents of Scranton. William H. Bramel is secretary and N. A. Dunyan is managing director.

MAKE RESERVATIONS TO THE MINING CONGRESS

The committee appointed to arrange transportations for members of the American Mining congress and appointed delegates to the annual convention to be held it to a Angeles, beginning September 26. E. T. Con. E. T. Dev. See now making reservations on the American Express. Sailt Lake Route, leaving Emerican Express. Sailt Lake Router, leaving Emerican Education. Important subjects are on the programme for discussion and many speaking of instances of reational reputation will be heard. Chestional reputation will also be exhibited the western states. When a chestional government will also be exhibited the mining states have promised large delegations and eastern interests will be well represented. As one of the press mining states of the west. SOME JARBIDGE ORE COMING TO SMELTERS Sil King Shild

COMING TO SMELTERS

The first shipment of ore ever made from the larbidge camp will arrive at the valley smelter during the day. It was sent out by way of Twin Falls, in two four-horse wagons, and comprises 110 sacks of some of the best ore found in that new camp. It comes from the Four-M lease on the Pavlak property and is estimated to run from \$2000 to \$3000 to the ton. The leasers have more of this ore in sight and other shipments will be made as fast as it is taken out. If the ore holds out, it is said the leasers will install a compressor and drills and get after the ore in a lively manner.

MUCH ORE WAITING IN MOSCOW GROUP

Company Has Good Tonnage Ready for Market Soon as Needed.

Visitors from Beaver county speak in high terms of the resources of the Mos-cow property in the Star district, and when the management again has the advantage of sufficient water for operating at full capacity there will be a very fine onnage of shipping ore in readiness for the local market. The Star district has suffered frequently from the lack of water for the various steam plants, but with the new water system now being in-stalled and which should be in use with-in thirty days, all these troubles for the companies interested in the plant will be histor.

in thirty days, all these troubles for the companies interested in the plant will be history.

Handicapped as the Moscow management is at present, from four to five cars of ore a month are hauled from the bins to Milford, and a shipment of about fifty ions a few days ago brought in the sum of \$2200. This ore comes from the work being carried forward from the 400-foot level. This ore has been followed from the 400 by the north winze for about 135 feet, and the south winze has followed it for eighty-five feet, both still being in ore and the two workings being all of 250 feet apart on the strike of the body. The body will average about two feet throughout, and it is a clean shipping carbonate, requiring no sorting whatever for the market.

IRON BLOSSOM SELLING IN CONSIDERABLE BLOCKS

Ordinarily the sales of Iron Blossom in the amount that passed hands on Thursday would be small, but these dull times these sales brought this issue within the feature class yesterday. The stock gained a little in strength in spite of the selling. The day as a whole was quiet, there heing sales for 36,350 shares of stock, the market value of which was \$12,014.75. The following were the unlisted and listed stock transactions: UNLISTED STOCKS.

Paine, Webher & Co. Letter, Boston—C & H. today reduced the price of copper from 12c to 122c. This did not stimulate any selling, and we believe copper stocks are pretty well liquidated. Today's market was slightly reactionary after the little spurt which we had yesterday. We still believe the coppers are a buy, but a little patience is needed. The New York market sold off slightly under profit taking. On any further declines, buy them, taking advantage of these bulges to sell out on as this market is only backing and filling for the time being.

NEW FISSURE CUT BY THE COLORADO

East Crosscut on the Fifth Level Finds Likely Looking

The possibilities of the Colorado Min-ing property were well illustrated on Wednesday by the discovery of a strong fissure on the 500-foot level. The management is driving a crosscut to the east from the 500 station, which is exploring that section of the group adjacent to the Any Number of Furnaces Can main or original ore body, and the finding of this fissure is expected to lead to something substantial.

something substantial.

Jesse Knight and J. William Knight were in Salt Lake on Thursday from Provo. They admitted to The Tribune that this fissure had been encountered, and that it was well provided with manganese and other mineralization, although they could not say whether or not sufficient values were present to dignify the contents of this new vein with the name of ore. They are awaiting additional details of the find with interest, and local stockholders likewise will keep an ear to the rails in the lope of catching some favorable tidings as this fissure is explored.

Tintle evidently knew of this discovery.

plored.

Tintic evidently knew of this discovery on Thursday, for there were some supporting orders for the stock yesterday in evidence from the camp. There yet remain a great many Colorado Mining enthusiasts, and they feel that the company yet owns an unprospected section of the Tintic district which is likely to present more resources as development continues.
